

Branch Covered Screen Spec Sheet

Frames

Panel frames are built of basswood. They come smoothly sanded or roughsawn for a distressed finish. They are then treated with a wood preservative, stained/painted, and varnished. The roughsawn style is lightly sanded to remove any splinters. Some of our two-tone finishes look best in this roughsawn style.

Twig Direction

Twigs can be placed diagonally within the frame to create a chevron/diamond look, or they can be placed horizontally. Less often are they placed vertically as vertically placed twigs cover longer spans (up to 20 inches), and generally create larger gaps.

Valances

Standard heights vary according to the length of the valance. Use this chart as a reference (unless otherwise requested):

18 inches to 42 inches in length -- valance height of 12 inches

43 inches and greater in length -- valance height of 16 inches

Note: Returns are 4 inches from outside face to wall unless otherwise requested. All valances come with tops and "L" brackets for installation.
