

Folding Panel Facts

Total Window's Folding Panel System has a maximum width of 192 inches and a maximum drop of 120 inches.

The panels are available in 3 different width ranges:

Small = 16 inches to 20 inches

Medium = 19 inches to 23 inches

Large = 21 inches to 26 inches

One system can carry up to a maximum of 8 panels.

The fabric panels hang from discreet gliders using a Velcro® carrier. This means the panels can be easily removed for cleaning or replacement.

The various stacking possibilities make the Folding Panel System suited to large glazed areas and areas with glass doors.

Unlike Sliding Panel Systems, the Folding Panel System will never lay completely flat. When fully closed there will always be a slight fold down the center of the panel, creating a 3-dimensional effect. However, your privacy is ensured through a slight overlap between each of the panels.

OPERATING METHODS

Crank operation provides an easy and comfortable way to control the panels.

A motorized system is available and can be operated by fixed wall switch or remote control. We can also integrate the motor into multiple home automation systems.
